

eniter

The evolution of doypack with cap for refills

Eniter offers to its clients this sustainable, affordable and functional solution.

With our **technical advice** in every needed step, from the choice of the most appropriate design for the packaging, to the selection and deployment of their equipment.

With **enifill®**, plastic consumption is reduced by 75-80% in comparison with the traditional rigid bottles, in line with the current priorities of the client.

Its striking appearance on the shelf catches the buyer's attention, who will notice both a lower price and a reduction of used plastic.

enifill®

It successfully substitutes plastic bottles thanks to different advantages:

Sustainability. In addition to plastic reduction vis-à-vis traditional bottles, it can be manufactured from recyclable material.

Economy. Reduction on the single-use plastic tax charge (€0.45/kg).

Functionality. Appropriate barrier for the preservation of any product.

Logistics. Less volume and weight in transportation and storing.

Marketing. Formats and appearance are versatile and adaptable. Ideal stability.
