

Doypack with a cap versatile and ready to use

Our cap-equipped doypacks use **75% less plastic than a common bottle** and are more visible in the supermarket shelf, which makes it highly attractive for the buyer.

Once the content has been **easily poured**, we can close the **hermetic cap** and store it until the next use.

It occupies less and less space as we consume its content, thus **optimizing space** throughout its lifecycle and making its transportation and storing easier.

A **sustainable, functional, and attractive packaging**.

**-75%
PLASTIC**

**eni
SPOUT®**

This is the alternative to traditional packaging.

- **Sustainability.** It can be manufactured both in single material and in paper. Easily recyclable.
- **Economy.** Reduction on the single-use plastic tax charge (€0.45/kg).
- **Functionality.** Appropriate barrier and hermetic seal for the preservation of any product.
- **Logistics.** Less volume and weight in transportation and storing.
- **Marketing.** Adjustable in formats and appearance depending on the packed good. The position, size and typology of the caps can be customized. This packaging has an excellent stability.
