RECYCLE[®]
COMPOSTJ

We design environmental-friendly packaging. Our experts take all the variables into account, from the rationale when selecting materials to machinability and, more importantly, the functional protection of the food.

Butter blocks impregnate the packaging, leaving it full of organic matter. A 100%-compostable paper makes all the sense in such a case. And we have it!

This material has an **industrial compostability certificate, according to the DIN 13432 standard.**

Our packaging for butter can resist both the fat and humidity of the food, whilst keeping it fresh and **preserving its taste and texture.**

This solution is an ecological alternative to the traditional aluminum packaging, and it is applicable both to individual butter portions and to butter blocks, for the on-premises channel and for distribution.

The consumer highly appreciates this upgrade, which they perceive as a contribution to environmental care. It can be disposed in the **paper waste container or in the bio waste container.**
