

Use of recycled plastic

The reuse of plastic is the final and most important stage to close the **circular economy loop**.

Under the designation **enitR**, we group the solutions developed by **Eniter** that incorporate recycled plastic films, also for food use. Our designs in no way compromise the functionality or safety of the packaging, and we guarantee that product protection is always our top priority.

By using recycled plastic, the following is achieved:

- Gradually integrate the fulfillment of the **recycling targets** set by the European Directive on packaging and packaging waste, aligning them with social expectations.
- **Reduce the rate** associated with plastic packaging in single-use containers, as recycling is exempt from this levy.
